

How to Have a PowerPoint Show in Expression Web

Microsoft makes it easy to port your PowerPoint show into an Expression website.

1. Open the PowerPoint file and then choose -> Save As -> type htm/html
2. Give the file a short name with no spaces so it can be easily used on the web
3. Open Expression and create a linkable graphic or text which will go to your presentation
4. On the File menu, click Import. In the Import dialog box, click Add Folder. In the File Open dialog box, click the folder that was created when you saved your presentation as a Web page, and then click Open. Then in the Import dialog box, click OK.
5. Copy the htm file created by PowerPoint into your web
6. Make your link to the htm file from the page you created - That's it!

For Example,

Linkable Expression button -----> PowerPoint Files
